

## Bed Operation

When you use the remote control for our son's bed and it doesn't work, then either,

- 1) There is a power cut – the light on the bottom left needs to be lit as in the photograph below or
- 2) The remote control has been locked – the light on the bottom right needs to be lit (the remote is locked after an interruption in the power supply, e.g. plug is switched off, power cut)

To unlock the remote control, use the black magnet attached to the lead and swipe it over the unlock symbol on the bottom right part of the remote control – the light will come on
