

# The House

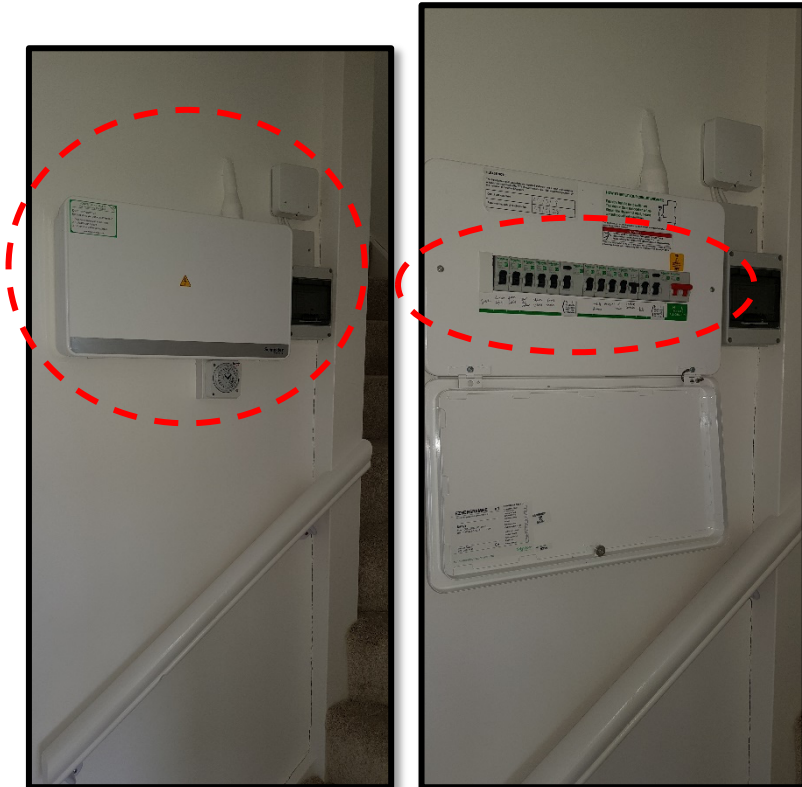

You will need access to the main house ONLY for the following reasons,

- For the dog if you want to walk her - you are under no obligation to this whatsoever. Otherwise she should be locked into the utility room off the kitchen (dogs are happiest enclosed in small spaces as there's less for them to guard)
- For emergencies, e.g. to show people where to check the electricity and water but please inform us immediately

Fusebox is at the bottom of the stairs.

All the switches should be pointing upwards.

You would only need to access these in an emergency, e.g. circuit trip. If you are not confident in what to do then please contact us immediately.

The hot water time should have its sliding switch in the middle position.

If you feel the timing of the hot water needs alteration then please contact us.

The tap (stopcock) for the water supply into the whole house is in the downstairs toilet. Lift off the white horizontal panel to the right of the toilet. The tap (stop cock) is recessed into the wall. Turning it clockwise will turn all the water off

Sign off sheet for staff to acknowledge they have read this policy
